OOP Assignment 6

Due: 11:59 p.m., 4 May 2016

Problem. In the zipped file hw6.zip, there is project called MidtermII. Open this project. The file test.h contains unit tests, which are commented out, for the class Fraction. Uncomment the unit tests and write member functions or regular C-style functions to make all unit tests pass.

Also, in the tests sortingLT and sorting GT, you need to implement FractionLT and FractionGT. These can be a class or a function; see the example on 0427-2016.

Hint: Do this by uncommenting one test at a time, work until it passes, and then move on the next test, and so on, until all tests pass.
